

01. EXECUTIVE SUMMARY | 職務要約

Full-Stack Software Engineer & Feature Lead with **4+ years of professional engineering experience** architecting scalable enterprise SaaS platforms, high-throughput microservices, and **Agentic AI orchestration systems**. Deeply experienced in integrating Large Language Models (LLMs), multi-agent swarms, computer vision quality gates, and event-driven backends into mission-critical software. A disciplined software craftsman aligned with Japanese organizational principles: active practice of **Hou-Ren-So (報連相)**, iterative continuous improvement (**Kaizen 改善**), and unwavering dedication to **Quality-First (品質第一)** engineering. Actively preparing for JLPT N5 and committed to long-term career relocation to Japan.

02. TECHNICAL SKILLS & AI COMPETENCIES | 技術スキル・AI統合

AI & Agentic Systems Integration

CORE FOCUS

Claude 3.5 Sonnet Vision API, OpenAI & Gemini APIs, Multi-Agent Swarms, Autonomous Task Orchestration, Tool Calling / Function Calling, Automated UI Quality Gates (DesignGate), Prompt Engineering, RAG Architectures, Vector Embeddings

Frontend Architecture

React 19, Angular, Next.js, Vue.js, TypeScript, JavaScript (ES6+), Redux Toolkit, Pinia, Tailwind CSS, Responsive Design, State Management, DOM Optimization

Backend & Microservices

Node.js, Express.js, RESTful APIs, Microservices Architecture, WebSocket / Socket.IO (Real-time), WebRTC, Redis Pub/Sub, gRPC, Distributed System Design

Databases & Data Modeling

PostgreSQL, MongoDB, MySQL, Redis (In-Memory Cache), SQLite, MariaDB, Prisma ORM, Mongoose, Complex Query Optimization, Indexing

QA, Testing & Quality Gates

Playwright E2E Testing, Jest Unit Testing, Postman API Automation, Visual Regression AI Analysis, CI/CD Automated Pipelines, Kaizen Code Reviews

DevOps, Cloud & Tooling

Docker, Linux (Ubuntu/CentOS), Git / GitHub / Bitbucket, Vercel, Netlify, Web Scraping (BeautifulSoup/Puppeteer), Vite, Webpack

03. WORK EXPERIENCE | 職務経歴

Feature Lead & Full-Stack Software Engineer — Mortgage Magic Ltd

Nov 2021 – Present | London, UK (Remote)

Enterprise Fintech CRM & UK Loan Origination System | Tech: Angular, Node.js, Express, PostgreSQL, Redis, Docker, Playwright

- Architecture & Engineering Leadership:** Led end-to-end development of critical mortgage origination modules, broker portals, and customer-facing application workflows used across the UK financial sector.
- High-Performance Distributed Backend:** Architected decoupled REST microservices in Node.js/Express with PostgreSQL and Redis caching, cutting average API response times by 35% across high-concurrency loan evaluation pipelines.
- AI & Automation Pipeline Integration:** Spearheaded the development of automated rate-scraping engines and criteria ingestion pipelines, integrating intelligent data extraction to reduce manual advisor data-entry effort by 60%.
- Quality Gates & Kaizen Methodology:** Enforced rigorous code review standards, Playwright end-to-end regression suites, and automated linting, driving zero critical production regressions over consecutive release cycles.
- Cross-Functional Collaboration (Hou-Ren-So):** Maintained disciplined daily reporting, sprint retrospectives, and transparent technical documentation across distributed engineering, product, and QA stakeholders.

Full-Stack Software Engineer — Freelance & Contract Engineering

Jan 2020 – Oct 2021 | Global / Remote

Custom Web Applications & Automation Tools | Tech: React, Node.js, TypeScript, MongoDB, MySQL, Socket.IO, Docker

- Full-Stack Product Delivery:** Engineered and deployed 8+ bespoke web applications and dashboards for international clients, delivering modular React frontends and robust Node.js backend services.
- Real-Time Systems & Event Pipelines:** Designed interactive, event-driven web applications featuring WebSocket streaming, live notification feeds, and reactive dashboard state synchronization.
- Client Relationship & Quality Delivery:** Managed full software lifecycles from requirement gathering and UI/UX prototyping to deployment on cloud infrastructure (Docker, Linux VPS, Vercel), maintaining a 100% on-time delivery record.

04. FEATURED ENGINEERING PROJECTS | 主な開発プロジェクト

DesignGate — Automated UI Quality Gate with Vision LLM

[\[Live Demo\]](#) [\[GitHub\]](#)

Tech: [Playwright Headless](#), [Claude 3.5 Sonnet Vision API](#), [Node.js](#), [TypeScript](#), [Next.js](#), [Tailwind CSS](#)

An innovative, automated QA quality gate that eliminates subjective UI code reviews by combining automated headless browser evidence collection with multi-modal AI evaluation.

- **Automated Evidence Pipeline:** Captures synchronized desktop/mobile viewports, full-page snapshots, and DOM hierarchy using Playwright.
- **Vision LLM Quality Grading:** Integrates Anthropic Claude 3.5 Sonnet Vision to evaluate design fidelity, layout drift, typography consistency, contrast ratios, and responsive anomalies against baseline design specifications.
- **Structured CI/CD Readiness:** Generates machine-readable JSON pass/fail verdicts and interactive visual audit reports, enabling zero-human-touch visual regression gating in deployment pipelines.

Agent-Swarm — Autonomous Multi-Agent CLI Orchestrator

[\[GitHub Repo\]](#)

Tech: [Python](#), [OpenAI / Claude LLM APIs](#), [Asyncio](#), [Multi-Agent Architecture](#), [CLI Tooling](#)

A distributed multi-agent swarm architecture designed for developer terminal assistants to execute complex, multi-stage software engineering tasks autonomously.

- **Hierarchical Agent Delegation:** Implemented specialized sub-agent roles (Planner, Coder, Reviewer, and Test Runner) that communicate via structured message buses and shared context memory.
- **Self-Correction & Tool Execution:** Agents autonomously execute bash scripts, inspect source code trees, parse linter errors, and iterate on bug fixes until acceptance criteria are satisfied.

Urban Grill — Real-Time Operations & Restaurant Platform

[\[Live App\]](#) [\[GitHub Repo\]](#)

Tech: [React 19](#), [Node.js](#), [Express](#), [MongoDB](#), [Socket.IO](#), [Tailwind CSS](#), [Vercel](#)

Full-stack enterprise restaurant management platform with real-time operational coordination and responsive customer ordering.

- **Real-Time Kitchen Dispatch:** Engineered low-latency bidirectional WebSocket (Socket.IO) pipelines synchronizing orders instantly between customer mobile devices and kitchen display terminals.
- **Role-Based Operational Workflows:** Implemented JWT authentication and fine-grained access control across customer, kitchen staff, and executive admin portals with live inventory tracking.

05. EDUCATION | 学歴

B.Sc. (Eng.) in Information & Communication Technology

[Mawlana Bhashani Science and Technology University \(MBSTU\)](#)

Tangail, Bangladesh | 2019 – 2023

Rigorous 4-year engineering curriculum covering Data Structures & Algorithms, Distributed Systems, Software Engineering, Database Systems, Artificial Intelligence, and Computer Networks.

06. LANGUAGES & CULTURE | 言語・企業文化

English

[Business Level](#)

Fluent in tech & collaboration

Japanese (日本語)

[Basic / Conversational](#)

JLPT N5 preparation in progress

Commitment to Japanese Engineering Principles:

[報連相](#) Hou-Ren-So (Proactive Reporting)

[改善](#) Kaizen (Continuous Iteration)

[品質第一](#) Quality-First Delivery

[ものづくり](#) Monozukuri Spirit
